

Proposal for Devotee Facing Mobile App

Prepared for:

Administrator, Dakshinamnaya Sri Sharada Peetham, Sringeri.

Prepared by:

Nikhil Joshi, Director, Leviosa Consulting Pvt Ltd

28 Feb 2026

Proposal number: 2526-02-003

1. Executive Summary

The institution has successfully established a robust digital foundation through its web-based platforms for accommodation booking, seva services, and online donations. These systems are powered by a secure API-driven backend architecture designed for scalability and long-term sustainability.

The proposed mobile application represents the next strategic phase of digital evolution — transitioning from transactional service delivery to a continuous, personalised devotional ecosystem.

This initiative is not a duplication of existing services, but a transformation in how devotees engage with the institution in a mobile-first digital era.

2. Strategic Rationale

2.1 Mobile-First Devotee Engagement

A majority of digital users now access services primarily through mobile devices. An official mobile application provides:

- One-touch access to all services
- Persistent login and seamless authentication
- Faster navigation and transaction completion
- Increased service adoption and frequency

This significantly reduces friction in devotional participation.

2.2 Unified Ecosystem

The application will consolidate:

- Accommodation bookings
- Seva booking & schedules
- Donations
- Updates & Official Announcements
- Personal participation records

Into a single, intelligent dashboard.

This creates a 360° devotee profile and enhances long-term relationship continuity.

2.3 Personalised Devotee Experience

Unlike a web portal, the mobile application enables:

- Personalised recommendations
- Festival and seva reminders
- Customised spiritual content
- Location-based updates
- Profile-based engagement pathways

This transforms the platform from a service utility into a personalised spiritual companion.

2.4 Real-Time Institutional Communication

Push notification capability enables:

- Festival announcements
- Booking reminders
- Special event alerts
- Urgent communication
- Campaign updates

This establishes a direct and uninterrupted communication channel between the institution and devotees.

2.5 Devotee Engagement & Gamified Participation Layer

A structured engagement module will include:

- Daily spiritual reading streaks
- Chanting counters and activity tracking
- Scriptural quizzes
- Participation milestones
- Recognition badges
- Contribution-based engagement levels

This transforms passive users into active participants within a structured devotional journey.

2.6 Strategic Data Insights

The platform will enable:

- Participation analytics
- Regional engagement mapping
- Festival response analysis
- Behavioural insights for future planning

This supports evidence-based digital growth and planning.

3. Scope of Work

The proposed development includes:

- Native or cross-platform mobile application (Android & iOS)
- Integration with existing secured backend APIs
- Unified devotee dashboard
- Accommodation, seva, and donation service integration
- Push notification infrastructure
- Devotee engagement and gamification module
- Secure authentication and encrypted data handling
- Administrative control interface for communication and content management
- Performance optimisation and scalable architecture
- App Store and Play Store deployment support

Digital Service Aggregation Layer

The mobile application will function as a unified access platform that aggregates and seamlessly integrates all associated digital services already implemented across separate platforms. This includes, but is not limited to:

- Bhajan and devotional media platforms
- Digital magazines and publications
- Online bookstore
- Panchanga / calendar tools and festival utilities
- Other affiliated content or service portals of the institution

This aggregation will provide devotees with single-point access to the institution's complete digital ecosystem through one consolidated mobile interface.

6. Strategic Positioning

While the website enables structured digital transactions, the mobile application will establish a continuous devotional relationship — driven by personalisation, engagement, and real-time communication.

This initiative positions the institution not merely as a service provider, but as a digitally integrated spiritual ecosystem aligned with contemporary engagement practices.

Commercials

Module / Service	Price (Rs.)
Devotee Facing Mobile App (Features as mentioned in section 2)	8,00,000

All prices mentioned above are exclusive of applicable taxes.

Inclusions:

- Strategy & architecture planning
- UI/UX design (premium mobile-first experience)
- API integration
- Engagement engine development
- Security hardening
- Testing & optimisation
- Deployment assistance
- Further support & enhancement for the tenure of the services AMC.

Payment Terms:

1. **50% advance** payment of **Rs. 4,00,000/-** (Mar 2026).
2. **50% payment** upon completion of deployment and during in-person support (Apr 2026), amounting to **Rs. 4,00,000/-**
